Journal of Non-Crystalline Solids 73 (1985) xvii–xx
North-Holland, Amsterdam

CONTENTS

Preface vii

Werner on Norbert
Remarks by Werner H. Kreidl ix

The bionic Kreidl
Larry Hench and June Wilson xiii

Section I. Glass structure

Spectroscopy simulation and scattering, and the medium range order problem in glass
Angell, C.A. 1

Nuclear magnetic resonance studies of glass structure
Bray, P.J. 19

The $(AlP)O_4 \rightleftharpoons Al(PO_4)$ transformation
Dietzel, A. 47

Defect structure of glasses. Some outstanding questions in regard to vitreous silica
Griscom, D.L. 51

Structure of glass: the struggle of ideas and prospects
Porai-Koshits, E.A. 79

Chemistry of glass
Shultz, M.M. 91

The structure of glass: past, present, and prescient
Weeks, R.A. 103

Section II. Transport, relaxation and flow

Transport mechanisms in alkali silicate glasses
Beier, W. and G.H. Frischat 113

Interaction of flow and phase separation – kinetics, structure, rheology
Hopper, R.W. 135

Modeling of viscoelastic and structural relaxation in glass
Rekhson, S.M. 151

Relaxation phenomena in glass
Stevels, J.M. 165

The mixed-alkali effect – a permanent challenge
Tomandl, G. and H.A. Schaeffer 179

Water in glass
Tomozawa, M. 197

(North-Holland Physics Publishing Division)

Section III. Electrical, optical and mechanical properties

Semiconducting glasses
Adler, D. 205

The glass electrode – applied electrochemistry of glass surfaces
Baucke, F.G.K. 215

Strong glass
Gardon, R. 233

The impact of recent developments on the theory of and prospects for ionic conduction in glass
Ingram, M.D. 247

Fundamental absorption of glasses in the vacuum ultraviolet region
Izumitani, T. and S. Hirota 255

From Griffith flaws to perfect fibers – a history of glass research
Kurkjian, C.R. 265

Fast ion conducting glasses
Minami, T. 273

Gradient-index in the year 2004
Moore, D.T. 285

Ionic transport properties in glasses
Ravaine, D. 287

Elastic moduli and fracture toughness of glass
Soga, N. 305

Models of glass strength and relaxation phenomena suggested by molecular dynamic simulations
Soules, T.F. 315

Glass solid electrolytes: past, present and near future – the year 2004
Tuller, H.L. and M.W. Barsoum 331

Ab initio calculations of the optical properties of ions in glass
Weber, M.J. 351

Section IV. Glass products

Glass products in 2004
Barton, J.L. 359

Flat glass products
Hammel, J.J. 363

Glass products in 1984... and glass products in 2004
Hutchins III, J.R. 379

Containers for the 21st century: opportunities for lightweighting
LaCourse, W.C., A.K. Varshneya and D. Alderson 389

Amorphous materials – past, present and future
Ovshinsky, S.R. 395

Glasses in microelectronics
Tummala, R.R. 409

Section V. Nucleation and crystallization – melting and forming

Glass-ceramics: current problems and prospects for 2004
Beall, G.H. 413

Response and structure of glass melts under extreme forming processes
Brückner, R 421

Possibilities of progress in glass melting
Cable, M. 451

Analysis of the continuous melting of glass
Cooper, A.R. 463

Nucleation and crystallization in glass-forming melts: old problems and new questions
Gutzow, I., D. Kashchiev and I. Avramov 477

Glassmelting in 2004
Hrma, P. 501

Kinetics of crystal nucleation in silicate glasses
James, P.F. 517

Revolution in glassmaking – a unit operations approach
Pollock, E.K. 541

Mathematical modelling
Rawson, H. 551

Improved modelling technique of electric glass melting
Staněk, J. 565

Crystallization of glasses: science and technology
Tashiro, M. 575

Crystallization and glass formation
Uhlmann, D.R. 585

Perspective of the development of bioactive glass ceramics for biomedical applications
Vogel, W. 593

Section VI. New glasses

Sol–gel 1984 → 2004 (?)
Dislich, H. 599

Prospects for heavy-metal fluoride glass optical components
El-Bayoumi, O.H., M.J. Suscavage and B. Bendow 613

Gel derived glasses
Gottardi, V. 625

Unusual non-crystalline solids from gels in 2004
Mackenzie, J.D. 631

Random and block copolymerization in metal oxide gel synthesis from metalorganic compounds
Mukherjee, S.P. 639

Some aspects of glass science evolution
Poulain, M. 643

Glasses and glass-ceramics from gels
Sakka, S. 651

Glasses and ceramics from colloids
Scherer, G.W. 661

New possibilities for variation of glass structure
Scholze, H. 669

New type of non-crystalline solids between inorganic and organic materials
Schmidt, H. 681

Trends in sol–gel processing: toward 2004
Wenzel, J. 693
